

Permits2000

by
Hunt Computer Design

Create Building, Plumbing, Electrical, and Mechanical Permits quickly and easily, while creating a comprehensive database of Permits, Parcels, Owners, and Contractors. Can be customized for your town. Additional modules can be developed for your town.

MODULES

- Permits- A complete database of all permits. This is a comprehensive database that can be searched by any criteria. Permits can be created or viewed from this module. Permit fees are auto-calculated using you fee criteria. The Parcel, Owner and Contractor modules are connected to the Permits for speed and ease of use. All fees are auto calculated based on your towns criteria.
- Fees- Track all permit, state, zoning fees, payment method etc.
- Reports- Customized reports based on any search criteria. Print a Ledger, Public Report, Contractor Report, Zoning, State fees, etc.
- Inspections- Database of all inspections using your inspection form. Can be installed on a Palm Pilot and downloaded and uploaded between the Palm and your in house system
- Contractors- A database of contractors and their employees. This module tracks company names, type, address, phone numbers, workers, etc. This database ties in directly to the Permits Module. Contractors and workers on a permit can be selected form pull down menus.
- Parcels- The Parcels Module is a database of all parcels in your town. This module tracks parcel location, subdivision, lot #, Tax Assessor #, etc. As you create a new parcel a related owner record is created.
- Owners- A database that list the owners (current and past) of a parcel. Information included; name, address, contact numbers etc.
- We customize the program with your town forms.

Permits2000 ties all of the modules together to create a simple, fast, and efficient way to write and track all of you town permits.
